New NHS OrthoMinder™ Makes Life Easier for Orthodontic Practices

VANCOUVER, WA (September 4, 2007) – New Horizons Software (NHS), developer and leading provider of orthodontic practice management software solutions, has released the latest in a series of features that make life easier for orthodontists and their staffs: the OrthoMinder™.

OrthoMinder is an innovative, time-saving patient management tool for NHS OrthoExec® Advanced Series users. With OrthoMinder, patient appointment reminders are sent automatically each day. The reminders are sent via email or text message according to patient or office preference, significantly reducing reminder call times and costs. Other OrthoMinder options allow practices to send patient birthday messages and other personalized notifications.

“New Horizons Software is committed to practice management excellence,” says Joretta Beanland, NHS President. “Our goal is to make life easier and more productive for orthodontists and their staffs. We achieve that by providing practice management software that is responsive, reliable, sophisticated, and easy to use.”

The OrthoMinder is fully integrated with existing NHS OrthoExec® Advanced Series practice management features: scheduling, accounting, treatment cards, diagnosis and treatment plan functions, patient files, correspondence, messaging, and more.

About New Horizons Software

Vancouver, Washington-based New Horizons Software, Inc., a leading provider of orthodontic practice management software solutions, has provided comprehensive practice management software and personalized training and support to the orthodontic community since 1988. The latest NHS software series, OrthoExec® Advanced, makes practice management easy for every kind of practice.

Orthodontic practices across North America turn to New Horizons Software to help them simplify daily tasks, reduce costs, and boost staff productivity. For more information, contact NHS at 1-800-543-5999 or visit www.NHSoftware.com.
